Hello,

I am looking for a professional to make adjustments to a couple (2) of pages, for the moment but later other similar jobs would come.

I have the pages in HTML, the sources of the same would be provided. I need to give it a responsive format, in both cases.

1. The first page is a login, this is the current version

The new version should include the classic menu button and stay in the center of the page, like next images

When I click the menu, it will be look like that

2. The second page is a little more complex,

it includes two menus, on the left side and on the right side.

Two menu buttons should be included, as shown in the picture

When I will click over the left menu, then the image overlay like picture

And similar for right menu
